## Data Logging

Customer: \_\_\_\_\_

Address: \_\_\_\_\_

Element Size: \_\_\_\_\_ (kW) – read from cylinder name plate

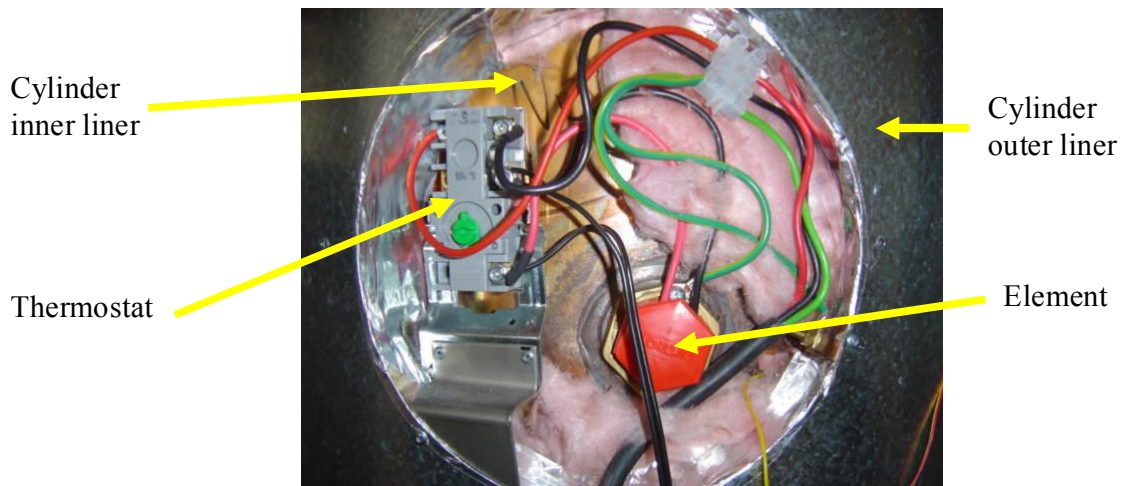

Cylinder Size: \_\_\_\_\_ (Litres or Gallons) – read from cylinder name plate

Start Date: \_\_\_\_\_

Removal Date: \_\_\_\_\_

## Fitting Instructions

- 1. Turn the electricity to your cylinder off at the wall.**
2. Remove the element cover from your cylinder
3. Place the data button on the inner liner of your cylinder, beside or above the element. The base of the data button should be held against the cylinder wall. Tuck the button in behind the insulation or the thermostat to hold it in place.

4. The button should be placed as follows.

5. Replace the element cover and turn your cylinder on at the wall again.
6. Remove the data button after the removal date above.
- 7. Please ensure the electricity is turned off before removing the data button.**
8. Turn the cylinder on at the wall once the button has been removed.
9. Return the button in the envelope provided along with this form. Please complete all the information at the top. Your report will be mailed to you once the data has been processed.
